

■■ LUMINA — Verbatim Read-Off Presentation Script

Word-for-Word Evaluator Presentation Script · Karnataka State Police Datathon 2026

Presenter Instructions: Read the italicized quotes aloud word-for-word. Follow the blue action cues on screen in real time. Total timing: 5–6 minutes.

■■ 0:00 – 0:45 | Introduction & The Problem Statement

[ACTION: Open the browser to the Lumina Command Hub (↑). Keep the screen clean with the map loaded.]

"Good morning, respected judges and senior officers.

Across 31 districts and 209 police stations in Karnataka, our officers handle thousands of First Information Reports every single week. But here is the challenge: most of this critical data sits locked away in static spreadsheets and disconnected station logs.

When a crime occurs, identifying whether a suspect is a repeat offender from another district, or recognizing an emerging crime corridor, takes hours of manual dossier searching.

*That is why we built **LUMINA** — an AI-powered Crime Intelligence and Spatiotemporal Analytics Platform developed natively on Zoho Catalyst for the Karnataka State Police.*

Lumina transforms raw case records into sub-second predictive intelligence, visual criminal network graphs, and automated tactical patrol routing. Let me show you how it works in real time."

■■ 0:45 – 2:00 | Tactical Command Center & Hotspot GIS

[ACTION: Pan across the Karnataka state map displaying the 5,005 FIR markers and precinct clusters.]

"Right now, on our primary Command Hub, Lumina is monitoring **5,005 live FIR records** across all 31 Karnataka districts.

*Rather than showing a static, historical heatmap, Lumina runs a custom spatiotemporal clustering algorithm called **ST-DBSCAN** directly in the background. It analyzes both geographic distance and temporal frequency to detect active, emerging crime corridors."*

[ACTION: Click the amber/red cluster in Bengaluru Urban (Indiranagar – MG Road). The Tactical Patrol Dispatch card will expand.]

"For example, looking at this active cluster in the Indiranagar–MG Road corridor: with one click, Lumina calculates the threat score — **94 out of 100** — and isolates the primary crime pattern, which is Cybercrime and Extortion.

*But Lumina doesn't stop at analytics. Look at the bottom of the card: it automatically generates an **Automated Tactical Patrol Route**. It assigns **Patrol Unit Alpha-4** with a recommended corridor path and an estimated response time of just **6 minutes**."*

[ACTION: Switch map layer styles on toolbar: Tactical Midnight → Satellite → Esri Dark.]

"Field officers and dispatch commanders can instantly toggle between our high-contrast Esri Dark Canvas for night operations, tactical midnight, and high-resolution satellite terrain."

■■ 2:00 – 3:15 | Universal Search Intelligence & Neural Voice Debriefing

[ACTION: Press `Ctrl + K` to open the Universal Search Intelligence modal.]

"When an officer is on patrol or investigating a case, speed is everything. By pressing **Ctrl + K**, we launch the **Universal Search Intelligence Center**.

This indexes across case numbers, accused aliases, victim demographics, IPC sections, and incident narratives with under 45 milliseconds of keystroke latency."

[ACTION: Type `"1693"` into the search box. Click ■ Pin to add to Priority Dossiers.]

"Let's search for FIR #1693/2026. Instantly, the complete dossier appears: the station jurisdiction, primary accused, and threat classification.

Officers can pin critical cases to their **Priority Dossiers Watchlist**, which is encrypted and saved to their active shift session so high-priority suspects are always one click away."

[ACTION: Click '■■ Audio Intelligence Briefing'. Let English audio play for 4s. Toggle to '■■■■■' (Kannada) and play for 4s. Close with ESC.]

"Now, listen to this: patrol officers driving or on the move cannot always read small screens. Lumina integrates Google Neural Speech Synthesis to provide an instant, hands-free spoken debriefing.

And with a single tap, Lumina translates and speaks the entire intelligence briefing in **pure Kannada**, ensuring complete regional accessibility for every constable and officer across the state."

■■ 3:15 – 4:15 | Strategic Analytics & Predictive Risk Scoreboard

[ACTION: Click 'Overview' on the left sidebar. Then click 'Risk Scores' in the top tab bar.]

"Moving to the strategic level, our **Overview Module** gives supervisory officers and the State Crime Records Bureau complete situational awareness.

Here we track live statewide KPIs: 5,005 total FIRs, 456 flagged repeat offenders, and district-by-district breakdown percentages.

Under the **Risk Scores** scoreboard, our predictive weighting algorithm calculates a dynamic threat index based on arrest counts, violent crime severity, and case status. Any suspect with a score of **85 or higher** is automatically promoted to the statewide supervisory watchlist for immediate inter-district tracking."

■■ 4:15 – 5:00 | Criminal Network Topology Graph

[ACTION: Click 'Network Topology' on sidebar (`/network`). Click a red central accused node to highlight connected cases & co-conspirators.]

"Organized crime rings rarely operate within a single jurisdiction. In our **Network Topology** module, Lumina maps multi-accused syndicates and co-conspirator networks.

By clicking on any primary accused, Lumina immediately highlights their connected accomplices and shared FIRs across different police stations — revealing criminal syndicates that would otherwise remain hidden across separate spreadsheet files."

■ ■ 5:00 – 5:45 | AI Copilot (Bilingual Ground-Truth RAG)

[ACTION: Click 'AI Chatbot' on sidebar (`/ai-chatbot`). Click a prompt or ask a question. Show live database citations.]

*"Lumina also features an intelligent **AI Copilot** powered by Gemini 2.5 Flash.*

*But unlike generic chat tools, our copilot uses a strict **Retrieval-Augmented Generation (RAG)** pipeline. It extracts case numbers, queries our live database first, and injects real records as ground truth — guaranteeing **zero hallucinations**.*

Notice how the copilot cites exact FIR numbers, station names, and threat metrics directly from our database. When toggled to Kannada mode, it automatically communicates strictly in Kannada script using official Karnataka State Police terminology."

■ ■ 5:45 – 6:30 | Official Sealed PDF Briefing & Conclusion

[ACTION: Return to `/overview`, click '[■ Export Briefing]', and open the downloaded PDF on screen.]

*"Finally, when senior officers prepare for morning briefings or court submissions, they can click **Export Briefing**.*

In less than a second, Lumina generates an official, sealed Karnataka State Police Intelligence Dossier — complete with state emblems, live metrics, top crime categories, and authorized signature blocks."

[ACTION: Open '■ ■ System Config' on sidebar. Show voice speed presets and cluster settings. Make eye contact with judges for closing.]

*"In the **System Configuration Center**, officers can tune spatiotemporal cluster sensitivity, threat thresholds, and customize neural voice playback speed from Ultra Slow to Ultra Fast.*

*To conclude: Lumina is **100% deployed and live on Zoho Catalyst serverless infrastructure** — scalable, resilient, zero-server maintenance, and ready for immediate deployment across the Karnataka State Police.*

Thank you, and we are now open for questions!"
